

PERIODONTAL AND IMPLANT
SPECIALIST CENTRE

Rana Al-Falaki

Flap for inserts

Welcome

Al-FaPerio offers specialist treatment for periodontal conditions, together with implant and bone solutions, within a friendly, care-centred environment.

Established in 2004, we are a specialist periodontal and implant practice, where we aim to successfully treat anyone with gum or missing teeth problems. This could include gum conditions such as infection, bleeding gums, bad breath, loose teeth and gum recession. We help to improve smiles that are gummy or have uneven gum lines; anything affecting the soft and hard tissues that support the teeth.

“My motivation has always been to provide the highest quality care for patients and advance the profession by pioneering the most up to date and minimally invasive treatments. We listen to our patients, we listen to our referrers, and I truly believe we provide a personalised responsive service that aims to improve quality of life for our patients.”

Rana Al-Falaki

Al-FaPerio Clinic
Best Periodontal Practice 2017 - UK

Why choose us

We are a multi award winning specialist practice, with a team dedicated to the treatment and prevention of infections, loss of the gum and bone surrounding the teeth. We use evidence-based proven clinical studies to create treatment plans for all our patients. Amongst other innovations, we apply the most cutting edge advanced laser technologies and surgical microscopes, allowing us to see accurate detail and correct the conditions.

Specialist Periodontists: We have a team of well-respected specialist dental surgeons and support staff who are uniquely trained in cutting edge technology and innovative techniques to give every patient the best possible results and ensure long lasting, cost-effective and comfortable dentistry. Together we have collated numerous accolades, advanced knowledge and unique skills in the field of periodontology.

Advanced Technology: We pride ourselves on using cutting edge advanced technology, including a wide range of the latest advanced lasers used for a variety of conditions. Scientific tools such as the ‘Advanced Digital Periodontal Probe’ for accurate pocket measurements and the innovative ‘Surgical Microscope’ allow for better specification of treatment.

Laser Periodontal Treatments: Specialist Rana Al-Falaki is UK Ambassador and Senior Trainer for periodontal lasers and produces fantastic results without the need for heavily invasive surgery. She is the principal expert on laser periodontology with vast experience that has positioned her as the ‘go-to’ person in this field of dental gum disease treatment in the UK.

Global Periodontal Laser User Society (GPLUS): Rana is also the founder of GPLUS, a society which helps specialist periodontists understand how to use lasers and their various implications. From this, the practice has developed exceptional knowledge on advanced periodontal care and the specific advantages of lasers.

Our treatments

Laser Gum Treatment

Traditional gum treatments tend to focus on the elimination of bacterial infection by manual debridement. The post-operative result can include gum recession and associated bone loss. The loss is irreversible and requires aesthetic oral plastic surgery to correct. Laser surgery can eradicate these types of post-operative results by eliminating the infection in such a way as to 'sterilise' the area being treated. This means that the probability of the infection reoccurring is minimal. It also encourages bone and gum regeneration helping to preserve the cosmetic aspect.

Rana Al-Falaki has created an innovative technique that has enabled her to elicit better than expected bone regeneration results. Her technique encourages bone cells to regenerate, leading to re-growth of the bone in the treated area. Hence, laser treatments can accommodate both vertical and horizontal bone loss situations. It is particularly effective for treating furcation areas as these are associated with a combination of both horizontal and vertical deterioration.

Periodontal Disease

With careful examination, we will highlight the extent of the infection and can customise treatment protocols and prevention programs for the patient.

Receding Gums

If not treated and managed correctly, this can lead to sensitivity, unsightly teeth, tooth mobility and tooth loss. We apply innovative clinical techniques to restore the aesthetics and functionality of the teeth together with your smile.

Dental Implants

There are a huge variety of implants now available on the market used to replace missing teeth. They differ in technicality of placement and post-treatment functionality. Our diagnosis and assessment of a patient will help highlight the best option available.

Peri Implantitis

Implants provide a suitable fixed solution where you can have teeth that do not have to be taken out like dentures. However, they too can become infected (Peri-Implantitis) leading to deterioration of the gum and bone in which the implant is embedded. Our clinical susceptibility assessment and customised post-operative protocols will help to prevent such deterioration and any failure of the implants.

Bad Breath Clinic

We are experienced in helping patients deal with bad breath or 'halitosis'. As an issue that isn't discussed openly due to embarrassment or fear of the consequences of the causal factors, we have a special clinic that is devoted to helping people address this condition in a sensitive and comfortable manner.

Overcoming Dental Anxiety

There are many aspects to overcoming dental anxiety and phobia. We have a selection of successful techniques and methods that have been clinically proven to help achieve dental results in a more relaxed way. So you can be guaranteed that your patients will always feel comfortable and be cared for in a manner they would expect.

We have various cases on our website that portray the level of detail and depth that goes into each treatment type to ensure a successful result. Please visit www.al-falaki.co.uk/laser-gum-treatment/before-and-after for more information.

Referrals

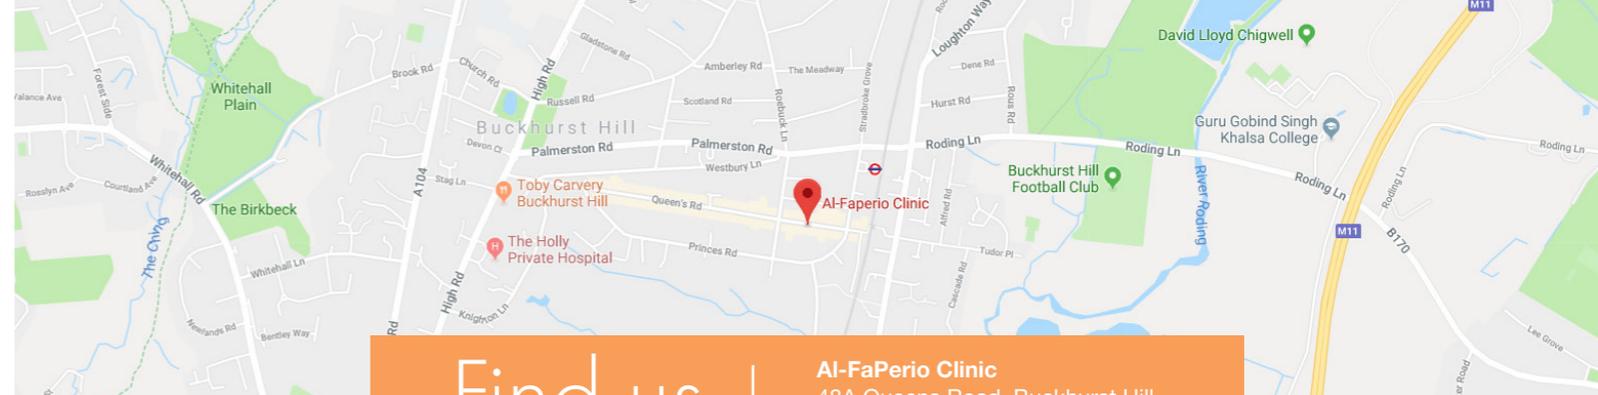

Communication

Patients today have a greater understanding of dentistry and hence have higher expectations for how their requirements are addressed. We can assure you that we are sympathetic to these needs. At Al-FaPerio, your patients will always receive an excellent standard of care. You will constantly be updated on their progress so that they continue to remain very much – your patients. As a specialist only practice, we pride ourselves on creating long term relationships with our referring dentists in which we cultivate very clear, open and honest communication on the journey of their patients with Al-FaPerio.

Procedure

- Once we receive a referral, we will contact your patient (preferably by phone or e-mail) and arrange a suitable appointment for consultation.
- Following the consultation, you will receive a full clinical report, outlining our findings and suggested treatment along with a copy of any radiographs.
- Your patient will also receive a copy of this report along with a written estimate of costs.
- You will then receive updates of patient progress at appropriate intervals.

When we get to the maintenance phase we like to work with you and your hygienists as much as possible. We will carry out the risk assessments and provide hygienist treatment plans to enable work to be done at your practice. We can also provide training for you and your hygienists on how to carry out supportive periodontal therapy.
